Tapered Pro Conical
streamlined clinical performance

Based on the proven CONELOG® connection and the Tapered Pro body, BioHorizons Tapered Pro Conical implant is designed for surgical efficiency with a best-in-class conical connection[1]. It delivers streamlined clinical performance with its two prosthetics platforms, enhancing restorative workflow efficiency and simplifying inventory management. This design offers clinical versatility for all indications, from single unit to full arch.

The surgical kits feature a patented parabolic drill design, allowing implant placement with as few as two drills. The Laser-Lok® surface treatment has been shown to create a connective tissue attachment and retain crestal bone.
