

IDS approves use of laser in dentistry

Prof Dr Norbert Gutknecht
WFLD President
Editor-in-Chief

_The IDS—International Dental Show—in Cologne showed once again the further dissemination and awareness of laser therapy in dentistry. A significant higher number of distributors showed their laser devices to the dental world with new innovations and treatment concepts. Seeing this I am even more sure that laser therapy will play an improving role in the wide field of modern dental therapy.

The upcoming European Division Congress of the WFLD in Rome promises to be an outstanding congress, especially with the location Rome as a special attraction. If you have not made your decision to participate in this congress it is more than high time now and I am sure you will not regret it!

Hope to see you in Rome!
