1. TRI® – Friction

This frictional connection guarantees maximum stability and eliminates the risk of a microgap in the platform switch concept.

2. TRI® – BoneAdapt

The patented conical implant body has been designed to perform and adapt ideally in the respective bone areas

3. TRI® – Grip

The apical part of this implant allows for a maximum of initial stability for all indications, but specifically for immediate placement.

TRI® Soft Tissue Interface

Consistent emergence profile on all prosthetic components

Crestal thread design

BoneShifting® to protect the cortical bone

Body thread design

Design for ideal adaptation to spongiosa and maximum surface area

Apical thread design

Immediate cutting impact with sharp apical threads
