

# RECIPROC wins innovation prize 2011

\_RECIPROC is probably the most significant new development since nickel-titanium instruments were first introduced to rotary preparation of root canals. RECIPROC completely prepares and shapes the root canal with one single instrument. The system was developed to simplify the procedure of preparing root canals while ensuring maximum security during the process. Hence, since its launch in March 2011, the RECIPROC® system has been adopted in numerous dental offices and clinics replacing manual instrumentation as well as rotary NiTi systems.

At six German dental trade shows, dentists voted for RECIPROC one-file endo to be awarded first prize in the materials and instruments for dental treatment

category of DZW and pluradent's German INNOVATIONSPREIS 2011.

During the ADF congress in Paris (November 2011), out of 56 entries Réciprocité (reciprocation technique) won the Dental Profession's Special Innovation Award.

It is the simplicity of working without instrument changes and only one motor setting, combined with safety and economic single use, that has dentists convinced.

# Everything you like about X-Smart— with a Plus

\_The new generation of the popular X-Smart endo motor from DENTSPLY Maillefer, the X-Smart Plus, will allow you to discover the WaveOne reciprocating single-file technique advocated by leading endodontists. The X-Smart user interface has been further improved by a large, bright colour screen, with a colour-coded file library for file selection at a single glance, making it the endo motor of choice for all ProTaper Universal users. The X-Smart Plus retains the familiar X-Smart features such as the miniature contra-angle head and the on/off button on the motor hand-piece.

as well as eight free programmes for individual settings. It is operated by a rechargeable battery and in continuous rotation provides a speed range of between 250 and 1,200 rpm and a torque range of between 0.6 and 4 Ncm. A warning sound helps you keep track of the file stress and the auto-reverse rotation at the torque limit reduces the risk of file breakage.

The X-Smart Plus endo motor from DENTSPLY Maillefer comes with a three-year warranty.

The motor works in both reciprocating motion and continuous rotation. The file library contains preprogrammed settings for WaveOne, ProTaper Universal, PathFile, Gates and RECIPROC,

# Moisture-activated temporary filling and sealing material

Tempit is packaged in 30 tips of 0.35g each in a jar.

**Still squeezing** those messy tubes? With Tempit, our unit-dose, moisture-activated temporary filling and sealing material, simply inject into a moist prep, tamp down and then dismiss the patient. Tempit sets in five minutes or less.

Tempit was developed specifically for sealing access cavities between root-canal treatments. It seals medicaments in and contaminants out between root-canal treatments.

Pre-filled, it eliminates set-up time. Unique delivery provides:

- direct injection without worrying that the material will harden before use;
- no clean-up; and
- eliminates the voids you get when placing other materials.

No more spatulas! No more tubes or jars!
