

Introducing LASOTRONIX— lasers for generations

[Picture: © Lukas Majerčík]

With more than twenty years of experience in laser technology, LASOTRONIX covers a wide range of applications, including a variety of therapy accessories. Cutting-edge technology is the trademark they all have in common: one unit is set to equal five different devices, making the use of CO₂, Nd:YAG, low-power diode lasers, PAD lamp or an ozone system as well as teeth whitening lamps. Applying the most powerful laser results in the shortest-possible treatment time and low operating costs.

Be smart...start treating at last!

Only recently, LASOTRONIX has launched its new diode laser SMART[™], especially designed for dentistry. Combining two laser wavelengths (635 nm/200 mW and 980 nm/10 W) to achieve high efficacy, this laser device makes use of fast cutting via coagulation and the best-possible "cold" stimulation and disinfection.

In addition, accessories such as the flexible, thin quartz fibre and a variety of surgical handpieces provide maximum versatility. As a result, SMART[™] is suitable for a vast range of applications and therapy forms, including microsurgery, dermatosurgery, endodontics, periodontology, whitening,

biostimulation and PAD—photoactive disinfection of root canals.

The laser unit also features an expandable database covering a set of predefined therapy protocols, which can be modified and assigned to a patient. Its unique versatility makes SMART[™] an essential asset to any modern medical office.
