Spectrum unites sharpness

There is hardly another dental equipment manufacturer who demonstrates such a passion for perfection as the Japanese, family-owned company Morita. Our work reflects the highest standards in terms of quality, reliability, precision and customer satisfaction.

One example: With its total of nine image formats the 3D Accuitomo sets the pace in 3D volume tomography. Even when the size is 170 x 120 mm the images do not lose any of their sharpness. This quality is achieved by J. Morita solely by using flat panel detector (FDP) technology. This is the only process which creates a balanced distribution of contrasts. The world over there is no other dental equipment manufacturer with a greater store of know-how and a wider range of products in the field of volume tomography than J. Morita.

Feel free to discuss 3D volume tomography with us – call us directly:
