

# Introducing **Nouvag AG**

We talk **implantology**

For over 40 years, Nouvag AG has committed itself to the development and manufacturing of medical devices and instruments and is famous throughout the world for its legendary Physio-Dispenser. The device was the first equipped with a peristaltic pump to deliver a sodium chloride water solution for the cooling of the rotating instruments to eliminate the feared necrosis of bone and its surrounding tissues. By constant further development and the implementation of new technologies and materials, great progress was achieved in many medical branches.

Our latest development in the field of Implantology is the motor system MD11 that is now available in version 2.0. We have now implemented the function of thread cutting and made the device handling even easier than it already was. During its development, much attention has been given to a quiet, low-vibration motor running, which is the most likely perceived feature for the patient and the surgeon as well. The insertion of the tubing set is done with very little effort due to the great visibility of the mounting bracket and easy-to-reach notches in the bracket. To be able to fully concentrate on the job and for not having to give the instrument out of your hand, the display shows all information at a glance, no key pressing necessary. Even the activation of the cooling pump and the changing of the pump speed is conveniently done with a foot press on the switches of the pedal. Also the rotation direction of the motor is directed by a foot switch.

And it goes without saying that the motor speed is varied by the tread plate at the pedal as well. To make the MD11 set complete, we offer all required contra angles such as the 1:1, 16:1, 20:1, 32:1 and 70:1.

Further information can be obtained from the Nouvag website, [www.nouvag.com](http://www.nouvag.com), where you will find technical data, pictures, accessories and even the user manual. In the online-contact form at our website you can ask our sales representatives any question about the MD11 and you will soon get a detailed answer with a quote and the address of a local dealer in any country of the world. We will be more than happy to help you with any solution for your needs. With any Nouvag device and accessory comes a piece of safety, precision and reliability, made in Switzerland.
