**Ceramic, in any case—Why different implant designs are the key to a successful surgery**

Dr Dominik Nischwitz/Tübingen (GER)

### LIVE SURGERY (Live streaming)

**Bone growing implants—intelligent use of biological laws**

As part of the regeneration of dissolved bone, bone regeneration follows irrevocably biological laws. The creation of cavities by so-called spacemakers in combination with the forming of a blood clot is a long-known procedure for guided bone regeneration (GBR). This live surgery, combined with a webinar, introduces an autologous therapy concept for guided regeneration of lamellar bone tissue which is based on the longstanding tent-pole-sunshade principle and requires no bone replacement material.

Dr Karl Ulrich Volz/Kreuzlingen (CH)

12:00–13:00

Break/Visit of the Dental Exhibition

### SYMPOSIUM 2

13:00 – 15:00

**camlog**

**Introducing CERALOG implant systems—components and indications**

Case presentation with regard to the live surgery

Dr Sandra Wagner/Dortmund (GER)

### LIVE SURGERY (Live streaming)

**Template-supported anatomically inserted soft tissue shaping**

Backward planning is indispensable for the successful reconstruction with implants. Apart from the three-dimensional imaging of the jawbone and its adjacent anatomic structures, virtual implant planning is increasingly used. Based on the available data, individual CAD/CAM gingiva formers made of zirconium dioxide are being manufactured in advance to shape the soft tissue in the aesthetic area. In this live surgery, the two-piece CERALOG implants are being precisely positioned in the aesthetic area by using a drilling template. In addition, individual healing abutments are being inserted. This treatment option, combined with an interdisciplinary exchange, leads to a predictable outcome.

Dr Rouven Wagner/Dortmund (GER)
