

# 1000 Shades of White

... all in 1 Syringe!

WORLD  
INNOVATION

Hall: 10.1  
Stand: A-038

## omniCHROMA

The Future of Composites: Infinitely  
from A1 to D4 in a Single Syringe

Colour through light: For the first time, colours are not created by the addition of pigments, but rather by deliberately induced structural colours combining with the reflected colour of the surrounding tooth. The OMNICHROMA phenomenon uses the Smart Chromatic Technology along with the spherical fillers from TOKUYAMA, which are manufactured according to the "cultured pearl principle". The effect: A single composite for all colours. Uniquely aesthetic. Uniquely smooth and shiny. Uniquely simple and time saving.
