

Dr Georg Bach

Dear Reader,

_Globalization progresses steadily and has also found its way into laser dentistry. This issue of laser—the international magazine of laser dentistry is going to prove this thesis.

We, whose goal it is to treat patients with monochromatic light, realize that the individual problems we are facing in our daily routines are, in fact, quite diverse.

We have been dealing with an array of problems: hesitant acceptability of laser dentistry within the universities and professional dental societies, availability of laser wavelengths and equipment and problems with reimbursements.

If we choose to stick together, we will realize the outstanding and notable level today's laser dentistry has reached, a level many didn't think was achievable only a few decades ago.

Inigorated by this awareness, each and every one of us should play their part and contribute to a truly global laser network for the benefit of the community.

laser is an excellent platform for scientific exchange. I hope you will enjoy this issue and welcome your feedback!

Yours sincerely,

A handwritten signature in black ink, appearing to be 'G. Bach', written in a cursive style.
