Biointegration

Biointegration is essential to the success and longevity of the implant. The optimum healing between the soft tissue, the hard tissue and the Patent™ Implant eliminates infections and reduces complications like periimplantitis and peri-mucositis. The cemented connection between the implant and the integrated abutment lies above the tissue and is completely covered by the dental crown.

The Patent™ Dental Implant System is made of zirconia with a hydrophilic surface and metal free prosthetics. Patent™ is the only two-piece implant system with peer-reviewed long term clinical research¹. Based on our demonstrated excellent results, we offer a lifetime guarantee.
