Waterlase Dentistry™

Achieve improved results from hard & soft tissue procedures associated with pre-implant grafting, during implant placement, stage-II uncovering & implant complications through minimally invasive & gentle YSGG Waterlase® technology without thermal damage and bleeding.

IMPLANT SURGERY, UNCOVERING & MORE

- ✦ Soft tissue grafts without scalpels with minimum bleeding and pain
- ✦ Effective debridement & decontamination of extraction socket without reliance on chemicals for immediate implant placement
- ✦ Gingivectomy/gingivoplasty in secondary uncovering of implants without bleeding or anesthetic
- ✦ Additional GBR procedures including ridge splitting, block grafts, sinus lifting without additional instruments
- ✦ Remove veneers & crowns in less than 5 minutes

AN ESSENTIAL TOOL FOR PERI-IMPLANTITIS & PERI-MUCOSITIS

- ✦ Obtain definitive degranulation of inflammatory lesions with photo-acoustic YSGG laser energy
- ✦ Effectively debride the contaminated implant without damaging the titanium surface
- ✦ Conserve more implant site connective tissue
