

Giornate Veronesi

Implantology and modern dentistry in May 2022

Implantology and modern dentistry are on the agenda on 20 and 21 May 2022 in Valpolicella/Italy. Under the Italian sun, so to speak, the Giornate Veronesi, after a time of corona-related restrictions, will offer top-class scientific lectures, seminars, table clinics, a live tutorial and a great social program.

All good things come in threes. Due to the event being hindered because of the corona pandemic in 2020 and 2021, this year, on 20 and 21 May 2022, the educational event Giornate Veronesi will be brought back to life with its special Italian flair. Dentists as well as their teams are invited to the congress resort Villa Quaranta Tommasi Wine Hotel & Spa in Valpolicella/Italy. The scientific program remains mostly identical to the previously planned version from last year. In addition to the main topic implantology, there will be general dentistry programs as well as programs for dental assistants. The event is therefore also ideally suited as a team training event. Except for one lecture, which will be held in English, the congress language will be German.

The congress will start on Friday morning with a team workshop. The surgical tutorials will begin at noon, followed by the table clinics. On Saturday the scientific lectures will take place in two parallel podiums. Thus, the program structure provides maximum flexibility for your individual schedules. The scientific director of the congress is Prof Mauro Marincola/ Italy.

In addition, the Giornate Veronesi offer an unusually large amount of space for speaker discussions and collegial exchange. Alongside the technical program, the get-together on Friday and the dinner party with wine and music on Saturday evening provide ample opportunity for this.

Additionally, while at the Giornate Veronesi, there will still be enough time, apart from the scientific events, to exchange opinions with all the speakers and of course for collegial interactions; on Friday the Get-Together and Saturday evening the dinner party with wine and music.

As the event will take place at the famous Tommasi family vineyard, it stands to reason for the congress participants to use the given opportunity of a wine seminar on Thursday evening and become "experts" in this field.

OSSTEM ON DEMAND

AIC Europe continues its free video-on-demand lecture programme in 2022

Osstem OnDemand keeps dental community up-to-date

AIC Europe (Advanced Dental Implant Research and Education Center Europe) has recently announced the speaker line-up for Osstem OnDemand, its video-on-demand lecture programme, for this year. Eight lectures by renowned European speakers are scheduled throughout the year, and the first lecture was released in February.

For the last two years, online learning has been proven an effective and reliable source of education in conditions of uncertainty. AIC Europe has therefore decided to continue providing new online content this year via Osstem OnDemand to ensure that the dental community can remain up-to-date in its knowledge no matter what the circumstances, reflecting the continued need for this type of educational opportunity in addition to face-to-face training.

Osstem OnDemand was first introduced in mid-2020 when the pandemic was harshly impacting the world and has ever since been providing content on various topics related to dental implantology, including sinus lift, treatment in narrow ridges, guided bone regeneration, and aesthetic and digital dentistry. More than 40 lectures by dental professionals from Europe and abroad have been already shared in the community and new content is coming up.

For 2022, new lectures will be released every third Tuesday of each month through AIC Europe's online platform (www.aic-europe.eu). If you register as a member, you will receive a newsletter whenever new content is released.

OSSTEM-HIOSSEN MEETING IN EUROPE

ROME

Auditorium del Massimo
28-29 / October

OSSTEM IMPLANT AIC EUROPE

AIC Europe

The Osstem-Hiossen Meeting 2022: The symposium returns to Europe

AIC Europe (Advanced Dental Implant Research and Education Center Europe) has confirmed that its symposium will be held in Rome (Italy) as scheduled on 28 and 29 October. The two-day event will consist of lectures by more than 20 renowned speakers from Europe and abroad, as well as a live surgery, a round-table discussion and an oral competition. The organisers expect more than 700 participants.

After a long break, the Osstem-Hiossen Meeting in Europe is finally returning. The last European symposium was held back in 2019, right before the pandemic hit the whole world, and dentists from more than 30 countries, not only from Europe but also from the Middle East, Africa and the Americas, gathered in Prague (Czech Republic). This year, the symposium invites you to the city of seven hills and the cradle of the Western Christian culture and civilisation, Rome.

Event highlights, including speakers from around the globe

Special guest speaker Dr David Chong from the US will give the symposium's grand opening address, which will be followed by presentations by top speakers from the host country, including Dr Francesco Mintrone and Dr Silvio Meloni. Prof Bilal al-Nawas from Germany, Dr Darko

Božić from Croatia and Waldo Zarco Nosti from Spain will also enrich the symposium with their academic and technical expertise.

The last session of the first day will be dedicated to the round-table discussion, during which three dentists representing Asia (Dr Hyunjoon Jung), Europe (Prof Marco Tallarico) and the US (Dr David Chong) will present different approaches to the rehabilitation of the upper jaw with terminal dentition.

A live surgery—the highlight of the symposium—will be performed on the second day as a collaboration between two dentists, Dr Hyunjoon Jung from South Korea and Dr Roberto Scrascia from Italy.

As a part of the symposium, an oral competition and a poster zone will also be organised. The call for submissions will open in April, and dentists and students will be able to submit their abstracts under three topics, digital, pros-

thesis and surgery. Submitted abstracts will be reviewed by the committee, and those accepted will be invited to present in the oral competition and poster zone.

For entertainment and networking among participants, a gala dinner offering Italian cuisine and unique cultural performances is scheduled for the Friday night.

The whole symposium will be live-streamed via Osstem's global broadcasting system, DenAll TV, and other related channels.
