Ceramic, in any case—Why different implant designs are the key to a successful surgery

Dr Dominik Nischwitz/Tübingen (GER)

LIVE SURGERY (Live streaming)

Bone growing implants—intelligent use of biological laws

As part of the regeneration of dissolved bone, bone regeneration follows irrevocably biological laws. The creation of cavities by so-called spacemakers in combination with the forming of a blood clot is a long-known procedure for guided bone regeneration (GBR). This live surgery, combined with a webinar, introduces an autologous therapy concept for guided regeneration of lamellar bone tissue which is based on the longstanding tent-pole-sunshade principle and requires no bone replacement material.

Dr Karl Ulrich Volz/Kreuzlingen (CH)

12:00–13:00

Break/Visit of the Dental Exhibition

SYMPOSIUM 2

Introducing CERALOG implant systems—components and indications

Case presentation with regard to the live surgery

Dr Sandra Wagner/Dortmund (GER)

LIVE SURGERY (Live streaming)

Template-supported anatomically inserted soft tissue shaping

Backward planning is indispensable for the successful reconstruction with implants. Apart from the three-dimensional imaging of the jawbone and its adjacent anatomic structures, virtual implant planning is increasingly used. Based on the available data, individual CAD/CAM gingiva formers made of zirconium dioxide are being manufactured in advance to shape the soft tissue in the aesthetic area. In this live surgery, the two-piece CERALOG implants are being precisely positioned in the aesthetic area by using a drilling template. In addition, individual healing abutments are being inserted. This treatment option, combined with an interdisciplinary exchange, leads to a predictable outcome.

Dr Rouven Wagner/Dortmund (GER)
