

The new PANAVIA POST— Long-lasting and reliable

Kuraray Europe has now developed PANAVIA POST, a glass-fibre post with excellent mechanical durability, which offers the superb properties of PANAVIA F 2.0 and hence provides an ideal solution for especially long-lasting and reliable restorations.

The new PANAVIA POST is made of methacrylate and non-epoxy-based, resin-reinforced glass fibre, characterised by particularly high durability and an optimal elastic modulus. The secret lies in Kuraray's unique monomer and surface treatment technology.

Together the proven PANAVIA F 2.0 and the new PANAVIA POST provide an ideal combination for perfect restorations. The extremely powerful adhesion between the individual components inside and outside the post prevents debonding and root fracture.

For many years, PANAVIA F 2.0 has been regarded as the solution for guaranteed permanent adhesion, especially for high quality and difficult restorations.

The design of the PANAVIA POST—a combined cylindrical-conic form with a rounded undercut at the apex—and its elastic modulus (very similar to dentine) minimise the risk of losing the post or of root fracture. Since the post is metal free, its translucency meets the most sophisticated aesthetic demands of dentists and patients.

Kuraray recently launched PANAVIA POST on European markets. Only the Benelux countries will have to wait a little bit longer—until 1 January 2012—to enjoy the excellent features of this latest member of the PANAVIA family.
